## **Strategy Description**

FAM Global Opportunities Plus Fund 'FGO+' seeks long-term growth of the portfolio by investing opportunistically across asset classes, geographies, and sectors. Instead of investing in flavour of the day concepts, the strategy focuses on performance drivers that make sense and are backed by empirical research.

## **Key Features**

#### **Smoother Ride**

By harnessing the power of diversification, a multi-asset approach into traditional and alternative assets provides stability and a less stressful investment journey. FGO+ generally allocates up to 60% in equities and is expected to generate higher returns than FGO.

### **Active Strategy**

Markets exhibit trends and cycles that create ongoing opportunities to invest in. Using Fundamental, Valuation, and Technical principles; we aim to invest into differentiated markets with favourable risk/reward that can deliver long-term outperformance.

#### **Efficient Access**

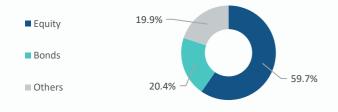

Invest into best-in-class investment managers, and low-cost ETFs to gain effective and targeted exposures to differentiated market segments.

#### **Fundamental, Valuation, and Technical**

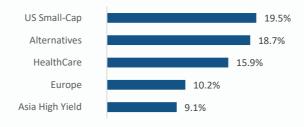

Identify pockets of value supported by favourable tailwinds, and higher likelihood of gains. The three-pronged approach forms the cornerstone of our investments.

#### **Asset Allocation**

### Top 5 Asset & Market Breakdown

# Market & Portfolio Developments

#### **Market Review**

2022 ended on a sour note for investors as both global equities and bonds declined -3.91% and -1.18% in December, respectively. The challenging market conditions, brought about by issues such as inflation, interest rate hikes, and concerns about a recession, led to poor performance for equities and bonds in 2022; with returns of -17.69% and -11.22%. Amid such a backdrop, the traditional "60/40" equity/bond portfolio did not provide much resilience (like it once did) as both asset classes declined in lock-step. While it may seem like investors had nowhere to hide, alternative investments, in which we have meaningful exposures, recorded a strong positive performance of 0.71% in December, and 17.80% in 2022.

#### Main Contributors 'What did well?'

**Emerging Markets** and **China 'A' equities** once again contributed positively to performance as investors grew more optimistic about China's economic recovery and the end of Covid-zero. Similarly, **Asian High Yield (AHY) bonds** added to the previous month's strong returns.

#### Main Detractors 'What underperformed?'

**US Small-caps** detracted from performance but remained relatively resilient throughout the year when compared to their large "blue-chip" counterparts. Looking ahead, their attractive valuations are expected to help them outperform when markets recover. **Biotech equities** lagged last month but remains an important diversifier during times of uncertainty.

#### **Market Outlook**

As we enter 2023, it is common to see predictions about recessions and market declines. However, predictions are at best false comfort – it is difficult to accurately (and consistently) predict what could unfold. Instead of relying on predictions, it is better to be prepared. One way is to ensure proper diversification, just like a football team needs both scoring and defending players. Today, our portfolio comprises recovery-themed positions that are expected to perform well during market recoveries and stability-themed positions that can provide downside protection amid volatility. Investing in the market is one of the best ways to grow long-term wealth, but not all will have the patience to realize them.
