

FAM Global Opportunity Plus Strategy

31 August 2023

Our Strategy

In today's uncertain world, partnering with managers well-versed in Alternatives is essential for more predictable outcomes. The FAM Global Opportunity Plus (FGO+) strategy is designed for investors who understand the need to invest across Equities, Bonds, and Alternatives, but prefer to avoid the emotional struggle while navigating a sea of complex data for asset allocation decisions. This paves the way for investors to enjoy the rewards of long-term investing with peace of mind.

20% Alternative holding to **enhance return** and lower volatility

Capital appreciation **compounded at 6%** target return over longer term

FVT

Focus on **undervalued opportunities** with good fundamentals in sustainable trends

Enhanced Multi-Asset Strategy: True Diversification

Having gone through a painful 2022, traditional '60/40' (60% equity, 40% bond) asset-allocation investors are left wondering about the effectiveness of diversification in a 'changed' world. Incorporating a 20% allocation to Alternatives, FGO+ enhanced asset-allocation portfolio delivers a less painful investing experience without compromising on long-term upside potential.

Manage Market Downtside

When the traditional '60/40' portfolio faced its worst year in 2022, FGO+ declined less due to the 20% allocation to Alternatives.

Capture Market Upside

In the right market conditions (e.g. Feb 2020 to Jan 2021), FGO+ has managed to deliver similar returns to the global equity index.

Source: Morningstar. (Left) Data from 1/1/2022 – 31/12/2022. 60/40 portfolio: MSCI ACWI Index 60%, Bloomberg Global Aggregate Index 40%. (Right) Data from 1/2/2020 – 30/1/2021. Global equity: MSCI ACWI Index 100%.

Discerning The Signals From The Noise

A three-pronged research process to identify signals that point us to **sustainable trends** which are underappreciated by the market, which come with **good fundamentals** and **attractive valuation**, with a higher likelihood of outperforming over the long term.

Fundamental

Study financial and economic data (e.g. GDP, unemployment rate, and inflation rate etc.) that may drive market movement to find opportunities with **good fundamentals** that are underappreciated.

Valuation

Picking the right valuation metrics (e.g. price-to-earnings, price-to-book, EV/EBITDA etc.) to spot **undervalued opportunities** and avoid overpaying for any investment with only good stories.

Trend

Seek inflection points in **sustainable trends** to capture overlooked opportunities and avoid less recognised risks (such as the end of a bond supercycle).

High Level of Active Management

Many actively managed funds underperform because they have a low active share. This happens when a portfolio's holdings are very similar to the referenced benchmark, a practice commonly referred to as 'benchmark hugging'. In contrast, **funds with a high level of active management may have greater potential for outperformance in the long run**, as there is no way any fund can outperform the market if they are investing like the market.

By investing in areas where we have the greatest conviction and applying it to our whole portfolio, we aim to provide better returns over risk through a full market cycle.

Market & Portfolio Developments

Fund Commentary

Markets have behaved like a roller coaster in recent months. The S&P 500 was up 6%, 3%, then -2% in June, July, and August (US small-caps that we hold saw 8%, 6%, then -5%). It seems to be getting less volatile month by month, but they mask the fact that even within July and August, the swings were about 8% each way. Along with that, they have subjected investors to an emotional roller coaster ride.

Why have market and portfolio performance been going up and down through the year? It's because markets are responding to positive and negative events amid the current market transition. Markets rallied strongly in July when economies looked to be headed for a soft landing, and central banks were able to rein in inflation without breaking the economy. In August, concerns that further Fed rate hikes would derail the recovery caused equity markets to pull back, with the Asian equity market declining more.

Why not invest in recovery themes only after there is more clarity? It's because by the time that is apparent, markets would already have recognized it, leaving much less upside for our investors if we wait on the sidelines. **The long-term return opportunity is there; all that's needed now is patience for their value to be recognised.**

FGO Plus's enhanced multi-asset strategy continues to offer a well-balanced portfolio of equity, bond, and alternative holdings with the goal of bringing a less painful investing experience for investors without letting go of the long-term upside potential. Over the past month, the allocation to Bonds and Alternatives helped to offset larger declines from the equity positions. Within the equity portfolio, Healthcare provided much needed stability during the recovery theme's pullback in August (driven by China 'A' and Small-caps).

The current market transition is driven by the shift out of the late-stage economic growth phase, and economies digesting the effects of higher interest rates, which has caused equity holdings to be volatile. As the economic-cycle progresses, and there is more clarity, fundamentals are expected to assert themselves and provide a boost to returns.

Key Position Highlights

We highlight positions that reflect the strategy's tactical asset allocation view, backed by our study of market patterns and trends over time. As a result, our strategies can be highly differentiated from conventional benchmarks, with the aim of long-term investment success.

Alternative Trend-following for Differentiated Returns

- Not all investment strategies are designed to grow the portfolio extensively or to protect the investment during a crisis. A trend-following strategy can act like an 'air-bag' in prolonged down-markets, while also being able to generate returns in a sustained bull-market.

- The clear benefit of trend-following is the ability to make money in up and down markets and provide a powerful source of diversification to the portfolio's equity and bond positions.

Emerging Market & China Equities To Position For The Next Up-cycle

- After a challenging stretch of performance, Emerging Markets and China 'A' equities resemble a compressed coil that holds a lot of upside potential for long-term investors.

- Past recoveries have shown to be particularly strong in the beginning, causing investors to 'miss-the-boat'. Which is why we avoid timing so close to such inflection points, preferring to be patient with our medium-long term investment horizon.

Highlight of Sub-Fund Managers

Winton Group Alternative

Winton is a **pioneer in trend-following strategies** and one of the most successful hedge funds in the world. It is led by David Harding, founded in 1997, Winton manages assets on behalf of some of the world's largest institutional investors – with \$10 billion worth of assets in their trend-following strategies today.

Winton has remained at the forefront of markets, capitalizing on trends across various cycles and asset classes, using **highly sophisticated and automated systems to remove human emotions and forecasts from investment decisions**. The firm's trend-following strategy trades 'long' and 'short' in over 100 futures markets to deliver the full benefits of their strategy – such as its ability to make money in up and down markets and provide a powerful source of diversification to equities and bonds. **In 2022, Winton's Trend Fund delivered returns of +18%**, when equity and bonds were down -16% and -18%, respectively.

Since its inception, Winton's flagship strategy has delivered outperformance over traditional equities and bonds in both absolute and risk-adjusted terms, with a **correlation of close to zero and long-term performance of around 10% p.a.**
