

Meranti Asia Equity (SGD)

29 August 2025

Our Strategy

For investors who believe in the Asia growth story but are worried about a potential United States (US) market crisis affecting it, the **Meranti Asia Fund (MAF)** offers a solution. MAF invests in a basket of Asia companies demonstrating strong potential to maximize returns for shareholders in the next five years, with a proven track record of resilience in past economic downturns and positioning to capture future trends in a drastically changing world. With a fixed budget to hedge against a potential US market crash, investors can be assured of capturing the opportunities of the next decade without worrying about the big "reset".

Who is this suitable for

The strategy is suitable for clients looking for Asia Equity strategy with US market crash protection

Equity holding to maximize returns

Capital Appreciation compounded at 8% target return

Dynamic Risk Management (DRM)
Fixed budget
Keep investors calm

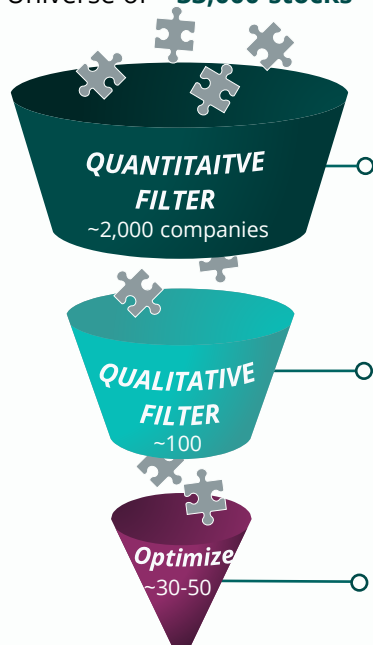

Asia: embracing volatility in a continent rich with opportunities

Asia offers investors access to a wealth of investment opportunities with its 33,000 listed companies. However, uncovering hidden gems takes more than just data. While data serves as an essential filter through which stocks are assessed, the manager's depth and breadth of understanding of Asia companies, alongside the experience of seeing the companies through different cycles, are essential skill to construct an effective portfolio.

Winning formula to uncover hidden gems in Asia

Illustration of how we select stocks within pockets of growth in Asia:

Universe of ~33,000 stocks

Quantitative filter: Apply a combination of fundamental metrics and rules to the universe of stocks and continuously assess and filter out interesting opportunities which form the foundation for our stock selection and analysis.

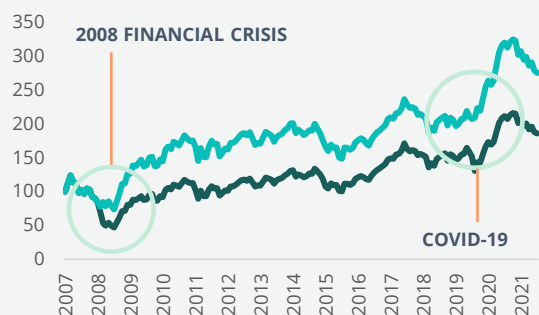

Qualitative filter: On the selected names, we assess the company's business strategy and financial data to identify companies that have strong economic moats to ward off competition and the ability to innovate to overcome challenges and drive growth.

Optimizer: We view the portfolio holdings as a whole, continuously optimized with names that are well positioned in respect of the current trends and the economic environment, to optimize the risk-adjusted return.

How does Dynamic Risk Mitigation (DRM) Help?

Black swan events are unexpected and potentially catastrophic for an investment portfolio i.e. 2008 Great Financial Crisis where the price of global equity markets declined sharply by -60%.

DRM addresses the urge of investors to exit the market in anticipation of market crashes so that investors can stay invested for the long-term. Through the use of a series of option positions, investors are shielded against such extreme market declines, enjoying lower drawdowns and faster portfolio recovery.

		Without DRM	With DRM
Largest Drawdown	2008 FC	-62.09%	-40.53%
	Covid-19	-20.71%	-5.34%
Months to Recover	2008 FC	63	7
	Covid-19	4	2
Total Return		85.97%	175.59%

For illustration purposes only for the period from August 2007 to February 2022. The reference benchmark is the MSCI AC Asia Ex Japan Index.

Position Highlights

Alibaba Group	China's biggest e-commerce company for online and mobile marketplaces in retail and wholesale trade.
China Resources Beer	A major player in the global beer industry and the maker of one of the world's bestselling beers by volume, Snow beer
Hundsun Technologies	Financial technology company offering integrated solution and services to the institutions and wealth management tools to individual investors
Tencent Holdings	World-leading internet and technology company offering high-quality digital content and services.
TSMC	World's dominant pure-play semiconductor foundry, with an unrivaled competitive advantage in advanced chip manufacturing and unmatched scale, serving tech giants like Apple, Nvidia, and AMD.

Discerning The Signals From The Noise

A three-pronged research process to identify signals that point us to **sustainable trends** which are underappreciated by the market, which come with **good fundamentals** and **attractive valuation**, with a higher likelihood of outperforming over the long term.

**Fundamental**

Study financial and economic data (e.g. GDP, unemployment rate, and inflation rate etc.) that may drive market movement to find opportunities with good fundamentals that are underappreciated.

**Valuation**

Picking the right valuation metrics (e.g. price-to-earnings, price-to-book, EV/EBITDA etc.) to spot undervalued opportunities and avoid overpaying for any investment with only good stories.

**Trend**

Seek inflection points in sustainable trends to capture overlooked opportunities and avoid less recognised risks (such as the end of a bond supercycle).

High Level of Active Management

Many actively managed funds underperform because they have a low active share. This happens when a portfolio's holdings are very similar to the referenced benchmark, a practice commonly referred to as 'benchmark hugging'. In contrast, **funds with a high level of active management may have greater potential for outperformance in the long run**, as there is no way any fund can outperform the market if they are investing like the market.

By investing in areas where we have the greatest conviction and applying it to our whole portfolio, we aim to provide better returns over risk through a full market cycle.

Market & Portfolio Developments

Commentary

MAF returned 1.89% in August, for gains of 13.9% in the first eight months of the year. This puts it as one of the leading fund among other well-regarded Asian funds.

Not an easy market to navigate

2025 has been tough. Markets began the year chanting American exceptionalism, only to be shaken by the DeepSeek moment and then the Tariff Tantrum. Investors have been trying to figure out Trump, scrambling between panic-selling and chasing trades.

The fund benefitted from its exposure to Alibaba. The stock which used to be a market pariah is up 43% this year, outperforming the likes of Nvidia which is up 30%. Why compare with Nvidia? Recently the stock has become an AI beneficiary as it recently unveiled Qwen’s trillion-parameter AI model.

Outperforming from positioning arbitrage

However, Alibaba is not a new AI play. The seeds of its AI dominance were sown long ago. Qwen is powered by Aliyun (Alibaba Cloud), the company’s data center unit which dominates Asia’s data center market, and is third globally behind Amazon AWS and Microsoft Azure.

Many will find reasons to not own a stock when it is down. While market commentators were focusing on slowing China e-commerce and which country Jack Ma was in, the company was laying the foundations of its AI capabilities. But if the objective is to enrich oneself from stock price going up, one should be finding reasons to own a stock especially when the price is down, when others are not positioned in it.

We are not a permabull on Alibaba but rather using it as a case study. At some point, the company may well be displaced. But until then, the stock will swing up and down and up, providing opportunities for investors to capture meaningful gains with a few well-timed trades. And when the time comes, we are prepared to exit the position rather than be left holding the bag.
